

Label Detection Sensor

E3S-CD68/63

Detect Labels Regardless of Label Color or Luster, Bottle Color or Clarity

- High-performance circuitry detects wide variety of labels on clear and colored bottles
- IP67 rugged metal body
- 1ms response time, high-speed production
- NPN, PNP, L.O., D.O. in one unit (switch-selectable)
- Quick-disconnect or cabled models available

Ordering Information

■ E3S-CD68/CD63 LABEL DETECTION SENSOR

| Connections | Supply voltage | Sensing type | Sensing range | Output | | Part number |
|------------------------|----------------|--------------|---------------|--------------------------------|----------------------------------|-------------|
| | | | | Туре | Mode | |
| M12 quick disconnect | 10 to 30 VDC | Diffuse | 40 mm ±10 mm | NPN and PNP, switch-selectable | L.O. and D.O., switch-selectable | E3S-CD68 |
| 2-meter attached cable | | | | | | E3S-CD63 |

Note: Accessories included: mounting bracket, screwdriver and M4 hex bolts. Cable must be ordered separately.

■ ACCESSORIES (ORDER SEPARATELY)

| Description | Part number | | |
|----------------------------------|------------------|-----------------------|-----------------|
| Cables | 2 m, 1-connector | 3-conductor | XS2F-D421-DC0-A |
| | 5 m, 1-connector | 3-conductor | XS2F-D421-GC0-A |
| Mounting bracket (included w/sen | sor) | ±20° angle adjustment | E39-L113 |

Specifications _____

| Part number | | E3S-CD68 | E3S-CD63 | | |
|--------------------------------|---------|---|---|--|--|
| Method of detecting | | Diffuse | | | |
| Supply voltage | | 10 to 30 VDC ripple 10% max. | | | |
| Current consumption | | 40 mA | | | |
| Sensing distance (See Note 2.) | | 40 mm ±10 mm | 40 mm ±10 mm | | |
| Light source | | Infrared LED (880 nm) | | | |
| Mode | | L.O. and D.O., switch-selectable | | | |
| Sensitivity adjustment | | 2-turn potentiometer | | | |
| Output | | NPN and PNP, switch selectable | | | |
| Capacity | | 30 VDC, 100 mA; residual voltage, NF | PN 1.2 V, PNP 2.0 V | | |
| Hysteresis | | 20% max. of sensing distance | | | |
| Response time | | 1 ms on, 1 ms off | | | |
| Circuit protection | | Reverse polarity and short circuit prote | Reverse polarity and short circuit protection | | |
| Indicators | | Red: Light received; Green: Stability | | | |
| Material | Case | Die-cast zinc | | | |
| | Panel | Sulfonated polyether | | | |
| | Lens | Acrylic | | | |
| | Bracket | Stainless steel | | | |
| Connection | | Quick-disconnect M12 | 2-meter attached cable | | |
| Cable bending radius | | | 25 mm min. | | |
| Weight | | 76 g | 115 g (with 2-m cable) | | |
| Enclosure rating | | IEC: IP67; NEMA 6P | | | |
| Ambient light immunity | | Incandescent: 5,000 ℓx max. | | | |
| | | Sunlight: 10,000 ℓx max. | | | |
| | | | Mutual interference protection (See Note 3.) | | |
| Ambient operating temperature | | -25°C to 55°C (-13°F to 131°F) no ici | -25°C to 55°C (-13°F to 131°F) no icing | | |
| Relative operating humidity | | 35% to 85% RH | | | |
| Insulation resistance | | 20 MΩ min. at 500 VDC | | | |
| Dielectric strength | | 1,000 VAC, 50/60 Hz for 1 min. | 1,000 VAC, 50/60 Hz for 1 min. | | |
| Vibration resistance | | 10-2000 Hz, 1.5 mm double amplitude hours in X, Y, Z axes | 10-2000 Hz, 1.5 mm double amplitude, or 300 m/s ² (approx. 30 G) for 0.6 hours in X, Y, Z axes | | |
| Shock resistance | | 1 m/s ² (approx, 100G) 3 times, X, Y, Z | 1 m/s ² (approx, 100G) 3 times, X, Y, Z axes | | |

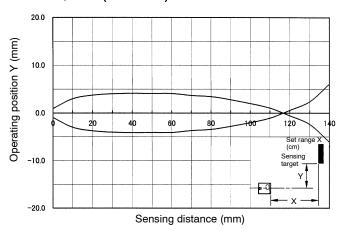

Note: 1. Accessories included: Mounting bracket, screwdriver, M4 hex bolts and instruction sheet.

- 2. With Kodak 18% grey card, 20 x 20 mm.
- 3. Mutual Interference Protection: Allows sensor to filter out interfering light sources from nearby sensors and avoid interference.

Nomenclature

■ MODE SELECT

■ OPERATION PANEL

Use the NPN or PNP output selector on the operation panel to select the type of output transistor.

Use the Light-ON or Dark-ON selector on the operation panel to select the operation mode of the E3S-CD68/CD63.

Operation

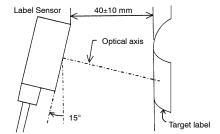

■ TIMING CHART

| Output configuration | Mode selector | Output transistor | Timing chart |
|----------------------|------------------|--------------------------------|---|
| NPN | Light-ON | On when light is received. | Light received Light not received Light indicator OFF Output ON transistor OFF Load Operate (relay) Release (Between terminals 1 and 4 or between brown and black) |
| | Dark-ON | ON when light is not received. | Light received Light not received Light indicator ON (Red) OFF Output ON transistor OFF Load Operate (relay) Release (Between terminals 1 and 4 or between brown and black) |
| PNP | Light-ON | On when light is received. | Light received Light not received Light indicator ON (Red) OFF Output ON transistor OFF Load Operate (Between terminals 3 and 4 or between black and blue) |
| | Dark-ON | ON when light is not received. | Light received Light not received Light indicator ON (Red) OFF Output ON transistor OFF Load Operate (relay) Release (Between terminals 3 and 4 or between black and blue) |

■ ALIGNMENT AND SENSITIVITY ADJUSTMENT

Alignment

- 1. Adjust the mounting angle of the Label Sensor as shown below until it is located in a position where it will not be affected by target objects.
- 2. Label detection will become stable when the Sensor is inclined by 15°.
- 3. Align the target label center to the optical axis of the Label Sensor.

Sensitivity Adjustment

Following the optical axis adjustment, carry out the sensitivity adjustment as shown below if detection is unstable due to influences from labels located on the other side of sensing bottle surfaces or bottle materials.

| Item | Position A | Position B | Setting | |
|-------------------------|---|---|---|--|
| Sensing condition | Label Sensor With a label | Label Sensor Without a label | | |
| Sensitivity adjustor | Min. Max. | Min. Max. | Min. B | |
| Indicators | ON to OFF OFF to ON STABILITY LIGHT (green) (red) | ON to OFF ON to OFF STABILITY O (green) O (red) | ON OFF STABILITY OFF LIGHT (red) | |
| Procedure | Place a target bottle label at the specified position. Set the sensitivity adjustor to the minimum scale position and gradually increase sensitivity by turning the sensitivity adjustor clockwise until the light indicator (red LED) turns ON. Position A is where the light indicator has turned ON. | Place a bottle without a label at the specified position. Set the sensitivity adjustor to the maximum scale position and gradually decrease sensitivity by turning the sensitivity adjustor counterclockwise until the light indicator turns OFF. Position B is where the light indicator has turned OFF. | Set the sensitivity indicator to the middle position between positions A and B. | |

■ INDICATORS

| Status | Indicators | | ON/OFF as indicated by the red indicator | Excess gain as indicated by the green indicator for temperature changes | Excess gain |
|--------------|------------|----------|--|---|-------------------------|
| Stable ON | Green | Red | ON (Red indicator is ON.) | Stable detection is possible at the rated temperature range. (Green indicator is ON.) | Operation level v.1.0 |
| Unstable ON | 0 |) | | | Operating level x 1.2 — |
| Hardella OFF | Green | Red | OFF (Dadiation to OFF) | | — Operating level — |
| Unstable OFF | 0 | 0 | OFF (Red indicator is OFF.) | | |
| | Green | Red | | | Operating level x 0.8 - |
| Stable OFF |) | 0 | | Stable detection is possible at the rated temperature range. | Operating level x 0.6 — |
| | Green | Red | | (Green indicator is ON.) | |

■ MUTUAL INTERFERENCE PROTECTION

If Photoelectric Sensors are installed side by side, each Photoelectric Sensor may be influenced by the light emitted from other Photoelectric Sensors.

The fuzzy mutual interference prevention function of the E3S-C enables the E3S-C to monitor any light interference for a certain period before the E3S-C starts emitting light so that the E3S-C can retrieve the intensity and frequency of the light interference as data. Using this data, the E3S-C estimates with fuzzy inference the risk of the malfunctioning of the E3S-C and controls the timing of the E3S-C's light emission.

When the risk is low: The E3S-C waits until there is no light interference and emits light.

When the risk is high:

The E3S-C emits light between each light interference moment.

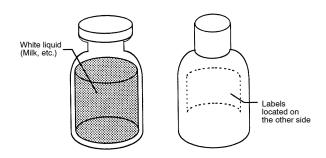

■ SETTINGS

Bottles

In the case of transparent bottles, target labels may not be stably detected due to influences from labels located on the other side of the bottle and colored substances contained in the bottles.

Since label detection depends on the label or bottle materials and color combination, be sure to confirm that detection is possible by using an actual product.

Precautions

CONNECTION

To avoid malfunction or damage, do not place the input/output lines of the Label Sensor in the same conduit as power lines. Either separate the wiring, or use shielded lines as input/output lines to the Label Sensor.

The cable connected to the E3S-CD68/CD63 can be extended up to 100 m, provided that the diameter of each wire of the cable is a minimum of 0.3 mm².

■ STARTUP OPERATION

A maximum of 100 ms is required from the time power is turned on until the E3S-CD68/CD63 is able to detect objects.

If power is supplied to the loads and the E3S-CD68/CD63 from different sources, turn on power to the E3S-CD68/CD63 first.

POWER SUPPLY

If a standard switching regulator is used as a power supply, the frame ground (FG) terminal and the ground (G) terminal must be grounded, to avoid malfunction due to the switching noise of the power supply.

If an inverter motor or servomotor is used with the E3S-CD68/CD63, the frame ground (FG) terminal and the ground (G) terminal must be grounded, or the E3S-CD68/CD63 may malfunction.

■ WATER RESISTANCE

Do not use the E3S-CD68/CD63 in water, in the rain, or outdoors.

To ensure the water resistance of the E3S-CD68/CD63, tighten the screws of the operation panel cover to a torque of 3.5 to 5.5 kgf • cm (0.34 N • m to 0.54 N • m).

■ OIL AND CHEMICAL RESISTANCE

Do not use the E3S-CD68/CD63 in oils or liquid chemicals.

■ CABLE

The E3S-CD68/CD63 uses an oil-resistant cable to ensure oil resistance.

Do not allow the cable to be repeatedly bent during application.

Do not allow the cable to be bent to a radius of less than 25 mm.

■ MOUNTING

When mounting the E3S-CD68/CD63, avoid heavy impact (see shock and vibration specifications) which may damage sensor and void warranty.

Use M4 screws to mount the E3S-CD68/CD63. The tightening torque of each screw must be: 3.5 to 5.5 kgf • cm (36.4 to 60.2 in • lb) maximum.

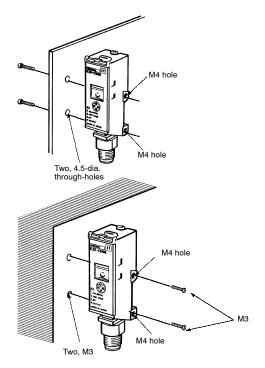

Mounting Bracket

When mounting the E3S-CD68/CD63 with the mounting bracket so that sensing targets will be in the direction of the mechanical axis, use the optical axis lock holes.

If it is not possible to mount the E3S-CD68/CD63 so that the sensing targets will be in the direction of the mechanical axis, move the E3S-CD68/CD63 upwards, downwards, to the left, or to the right. Secure the E3S-CD68/CD63 in the center of the range where the light indicator will be lit and make sure that the stability indicator is lit.

Direct Mounting

Mount the E3S-CD68/CD63 as shown in the following illustration.

NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.
