

Introducing 56 Gb/s QSFP+ Active Optical Cable Assemblies

TE's PARALIGHT active optical cable assemblies use state-of-the-art technology to provide cost effective high-data throughput interconnects. These cable assemblies incorporate E/O and O/E conversion into the connector shell to yield a dramatic improvement in PCB real estate utilization. Using 850 nm VCSEL technology, they operate over a data rate of 2.5 to 14 Gb/s per lane (four lanes) with a maximum bi-directional aggregate data rate of 56 Gb/s.

These cutting edge cable assemblies are available in lengths up to 100 meters using 50 micron core fiber and offer EOE circuitry designed for use with data streams encoded up to 64B/66B in InfiniBand standard and Ethernet applications. Our PARALIGHT cables have QSFP style connectors incorporating a I2C serial interface, which can be used to identify the product and performance capabilities.
